Introduction

Research hospitals focus on fostering and integrating medical, teaching and scientific research personnel and promoting their development. Hospital personnel education training strategy is the core of hospital development, and is the guarantee of future development of hospital and international standards.

Method

This paper analyzes and discusses the hospital personnel education training strategy in the research hospitals, especially training needs for medical talents.

Findings

Hospital personnel education training strategy can improve the level of medical technology, to enhance the overall strength of the hospital.

Conclusion

Hospital personnel education training strategy is able to establish a rational structure of the personnel system, training to meet the needs of different levels of research-oriented hospital medical personnel.

KEY WORDS: Research Hospitals; the strategy of medical personnel education training; talent education and training; demand guided
